## NeoColab\_REC\_CS23231\_DATA STRUCTURES

### REC\_DS using C\_Week 1\_COD\_Question 4

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

As part of a programming assignment in a data structures course, students are required to create a program to construct a singly linked list by inserting elements at the beginning.

You are an evaluator of the course and guide the students to complete the task.

##### ***Input Format***

The first line of input consists of an integer N, which is the number of elements.

The second line consists of N space-separated integers.

##### ***Output Format***

The output prints the singly linked list elements, after inserting them at the beginning.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 5

78 89 34 51 67

Output: 67 51 34 89 78

### **Answer**

```
#include <stdio.h>
#include <stdlib.h>
```

```
struct Node {
    int data;
    struct Node* next;
};
```

```
void insertAtFront(struct Node**headref,int newdata){
    struct Node*newnode=(struct Node*)malloc(sizeof(struct Node));
    newnode->data=newdata;
    newnode->next=(*headref);
    (*headref)=newnode;
}
```

```
void printList(struct Node*node){
    while(node!=NULL){
        printf("%d ",node->data);
        node=node->next;
    }
    printf("\n");
}
```

```
int main(){
    struct Node* head = NULL;
```

```
    int n;
    scanf("%d", &n);
```

```
    for (int i = 0; i < n; i++) {
```

```
int activity;
scanf("%d", &activity);
insertAtFront(&head, activity);
}

printList(head);
struct Node* current = head;
while (current != NULL) {
    struct Node* temp = current;
    current = current->next;
    free(temp);
}

return 0;
}
```

**Status :** Correct

**Marks :** 10/10
