Batch: 2028

Degree: B.E - CSE

NeoColab_REC_CS23231_DATA STRUCTURES

REC_DS using C_Week 2_COD_Question 1

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

Output Format

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: a b c -
Output: Forward Playlist: a b c
Backward Playlist: c b a
Answer
#include <stdio.h>
#include <stdlib.h>
struct Node {
char item;
  struct Node* next;
  struct Node* prev;
}:
// You are using GCC
void insertAtEnd(struct Node** head, char item) {
 struct Node* newnode=(struct Node*)malloc(sizeof(struct Node));
 newnode->item=item:
 newnode->next=NULL;
 if(*head==NULL){
   newnode->prev=NULL;
   *head=newnode:
   return;
```

```
while(temp->next!=NULL){
temp=temp->next
}
      temp->next=newnode;
      newnode->prev=temp;
    void displayForward(struct Node* head) {
      struct Node*temp=head;
      while(temp!=NULL){
        printf("%c ",temp->item);
        temp=temp->next;
      printf("\n");
    void displayBackward(struct Node* tail) {
      struct Node*temp=tail;
      while(temp!=NULL){
        printf("%c ",temp->item);
        temp=temp->prev;
      }
      printf("\n");
    }
    void freePlaylist(struct Node* head) {
      struct Node*temp;
    while(head!=NULL){
        temp=head;
        head=head->next;
        free(temp);
    }
    int main() {
      struct Node* playlist = NULL;
      char item;
      while (1) {
        scanf(" %c", &item);
       if (item == '-') {
           break;
```

```
insertAtEnd(&playlist, item);

struct Node* tail = playlist;
while (tail->next != NULL) {
    tail = tail->next;
}

printf("Forward Playlist: ");
displayForward(playlist);

printf("Backward Playlist: ");
displayBackward(tail);

freePlaylist(playlist);

return 0;
}

Status: Correct

Marks: 10/10
```
